The Leviton Load Center Offers a Robust Retrofit Solution

These days, seasoned homeowners seek out modern upgrades for their homes so they can enjoy the convenience of the latest technology by way of products that add value to their investment. Historically, updating their home's load center was not at the top of the list - but it is now! Ian Ramirez, President and Owner of Upstate Electrical Solutions in Greenville, S.C., noted that his company has had a lot of success installing the Leviton Load Center in existing homes (built between the 1940's and 1980's) so homeowners can enjoy the benefits of today's technology.

With optional Smart circuit breakers, the Leviton Load Center takes power distribution and elevates it to power management. Users can take advantage of smart functionality by using the My Leviton app, which gives them access to load center data including real time energy consumption,

system status/indications if critical loads need to be addressed, when and why a circuit breaker trips and so much more. "This product is very well thought out and much more robust," said Mr. Ramirez, "Techies love it!" Additionally, the sleek, modern design featuring a white enclosure with optional observation window offers an attractive solution for retrofits. As Mr. Ramirez notes, "Customers love the look. Not all load centers are in the garage, often in older homes they are inside the home in a hallway. The Leviton Load Center is a cleaner look."

Upstate Electric Solutions partners with local distributor Cregger Company, Greenville, S.C., so together they can bring customers the latest in home electrical technology. In addition to using the Leviton Load Center exclusively, Upstate Electrical Solutions recommends the Leviton 51110-SRG Residential Surge Protection Panel to its customers. Mounted at the service entrance in homes, this panel offers advanced surge protection for modern electronics and appliances, reducing the risk of damage from spikes and surges entering the property through AC power lines. Mr. Ramirez explained, "we install the Leviton Surge Panel on every house we retrofit to protect today's "smart appliances" such as refrigerators and stoves."

With household basics from refrigerators to lighting becoming increasingly Smart in functionality, it's important for the Load Center to provide not only safe power, but smart power. The Leviton Load Center with optional Smart Connectivity offers the ideal upgrade for a whole home smart solution.
